### **DETAILED ACTION**

1. This is in response to Applicant's arguments filed August 22 2005, with respect to claims 6-9 and 18-41 have been fully considered and are persuasive. Therefore, the rejection of last Office action has been withdrawn.

2. Claims 1-5 and 10-17 have been canceled.

Claims 6-9 and 18-41 remain pending for examination.

### **REASONS FOR ALLOWANCE**

3. With respect to claims 6-9 and 18-41 are allowed over the prior art of record.

The following is an examiner's statement of reasons for allowance:

With respect to claims 6 and 29, the claimed features "generating a security context from the logon information and authorization information that is necessary for access to the resource, wherein the security context comprises a plaintext header and an encrypted body, and the plaintext header comprises a security context ID, a key handle, and an algorithm identifier and key size; providing the security context to the user; and sending by the user to the processing system the security context and a request for access to the resource" in conjunction with other elements of the independent claims would not found anticipated or obvious over the prior art made of record. With respect to claim 18, the claimed features "generating a security context

Art Unit: 2162

from the logon information and authorization information that is necessary for access to the resource, wherein the security context comprises a plaintext header and an encrypted body; the plaintext header comprises a security context ID, a key handle, and an algorithm identifier and key size; and the encrypted body comprises at least one of a user identifier, an organization identifier, access information, an expiration time, public key information, symmetric key information, and a hash; providing the security context to the user; sending, by the user to the processing system, the security context and a request for access to the resource; and determining, by a stateless component of the processing system, based on the security context sent with the request for access by the user, whether access to the requested resource should be granted to the user” in conjunction with other elements of the independent claims would not found anticipated or obvious over the prior art made of record.

The dependent claims, being definite, further limiting, and fully enabled by the specification are also allowed.

The closest prior art, Misra et al., U.S. Patent Number 5,999,711 relates to the use of logon certificates in a distribution system. Karaev et al., U.S. Patent Number 5,802,518 relates a computer based system and method for the electronic distribution of information. Serbinis et al., U.S. Patent Number 6,314,425 relates to apparatus and methods for use of access tokens in a system for managing electronic documents over open networks. Steven M. Bellovin, Probable Plaintext Cryptanalysis of the IP Security Protocols but fail to teach the above limitations.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
